

## Performance Series

### Freeway-4 & Freeway-5 Basses

Comfort, balance and classic bass sounds are what the Freeway basses are all about. Each rock maple neck is hand-finished and shaped with the Godin Ergocut technique. The convertible bridge provides the option of stringing through the body—adds snap to the sound—or through the back of the bridge—for a mellower tone. Two Godin single coil pickups are screwed right into the body amplifying the natural resonance of the bass producing smooth and dynamic tones.
